

# Orthopedic Surgery

## Fracture Repair

We offer individualized surgical fracture repair utilizing moldable plates, wires & pins. With surgery & proper aftercare, the fractured bone can heal & our goal is to restore pain-free mobility for the affected limb.

## Cruciate Repair

One of the most common injuries dogs can suffer from is a torn cranial cruciate ligament. When this happens, the knee becomes unstable & progresses to osteoarthritis. Because this injury can't be healed with medication or rest, surgery is required.

## Patella Repair

Patella issues are common in toy & miniature breeds. This painful condition can be fixed through surgery modifying the patellar groove to keep the kneecap from slipping.
